NU HOLDINGS // OFFICE OF THE CFO AND CORPORATE GOVERNANCE

Chief of Staff to the CFO: planning, the Board and the new HQ

Case presentation, 60 days into the role. Cassio Modelli, October 2026. Nu figures are public Q2'26 data; my assumptions are on slide 3.

PLANNING

$60M of asks, a $25M cap

Bring planning in-house and give every ask an answer.

GOVERNANCE

A Board in four weeks

Two executives disagree on capital, and the Board book is late.

SPECIAL PROJECT

A new HQ

Legal, tax, compliance and campus terms across jurisdictions, with no line authority.

How I triaged them: the Board date is fixed, so it goes first. The budget sets the precedent for every cycle after it. The HQ is chartered now and paced by gates.

THE ANSWER

One way of deciding, used three times: the plan, the Board, the HQ

The same mechanism runs all three. The rule is published before the argument. Options go to one named decision owner, on a date. The decision, the rationale and the dissent are recorded. Only exceptions come back up.

DELIVERABLE 1 // PLANNING

$25M in two releases

Every ask needs a business case. $15M on 1 January, $10M at Q1 close if the numbers hold. No flat cuts.

DELIVERABLE 2 // BOARD

One test, one decision owner

Both executives' positions go into the memo; the CEO decides at the lock; the dissent is recorded. The book ships 7 days before the Board.

DELIVERABLE 3 // HQ

Four decision gates in 120 days

Can we, what may we offer, who may bind Nu, do we commit: each the CFO's call on a pack I assemble. Licensed executives sign.

DELIVERABLE 4 // LEADERSHIP

Rigor inside the business

I work in the numbers with the GMs. Experts own their judgment, I own the process, the CFO owns the decision and its risk.

THE ASK

Approve the $25M FY27 cap in two releases, the Board calendar and the HQ charter. Up to $15M more is held in reserve, outside the plan: the CFO decides, and Risk can block it. I report back in 90 days.

WHAT I KNOW AND WHAT I AM ASSUMING

What I know, and the assumptions that could break the plan

#	Statement	Class	Basis
A1	Nu Q2'26: 138.9M customers; monthly ARPAC $17.1; cost to serve $1.0; efficiency ratio 19.5%; ROE 33%; net income $1.06B.	FACT	Q2'26 release and 6-K
A2	Management expects the FY26 efficiency ratio near 20% and will keep the US entry within about 100 bps of efficiency-ratio impact.	FACT (management guidance)	Q2'26 earnings call, 13 Aug 2026
A4	The two MTeam members disagree about the growth-opex envelope, core markets against new bets, not about regulatory capital by entity. If wrong, slide 7's capital ranking is the decision.	ASSUMPTION	Case brief is silent
A5	$8M of the asks can be met on the shared platform at near-zero marginal cost; what Engineering cannot confirm moves to the case track, never above the cap.	ASSUMPTION	My estimate
A6	Spend above $25M only from H1 profit above plan, inside the ~20% guide, with NPL 90+ on plan. The CFO decides; Risk can block; IR sets the disclosure.	RULE (proposed)	To agree with the CFO
A10	The cap is FY27's: first release on 1 Jan 2027, second at Q1 close (31 Mar), the reserve at H1 close. The hub needs 4-6 people.	ASSUMPTION	Calendar fiscal year; sizing is mine
A12	Net new FY27 cost for the hub and the HQ is small and is funded inside the $25M before the GM releases. If it is material, the second release shrinks by that amount.	ASSUMPTION	To size with the CFO this week

Confirming now: the real MTeam positions; the Board and committee calendar; who owns the planning model; local-CFO decision rights in Mexico and Colombia; the HQ project's status and whether a site shortlist exists; today's cycle time and forecast accuracy. Full list A1-A13: backup A.

Staged release beats flat cuts: the precedent matters more than the $35M

THE GAP

$35M

$60M of asks against a $25M cap.

About 15 bps of annualized revenue.

About 1.1% of annual opex.

About 0.2 points of efficiency ratio.

Efficiency ratio 19.5% in Q2'26 (17.6% in Q1); FY26 expected near 20%. Cost to serve $1.0 a month ($0.8 a year earlier) against $17.1 of ARPAC.

What is broken today

Asks arrive as one $60M number, with no shared template, no shared data and a cap set top-down. So the argument is about the number, never the evidence. This first central cycle decides whether GMs bring real cases next year or pad their asks.

Three ways to close the gap	Score	Why
Equal cut (every unit gets 42% of its ask)	57.8	Fast, and it teaches GMs to pad next year's ask
Core markets first (pause new bets)	63.8	Honest, but new bets get nothing to earn
Business-case readiness and staged release (recommended)	**91.8**	Wins on growth return, ownership and agility; loses only on speed

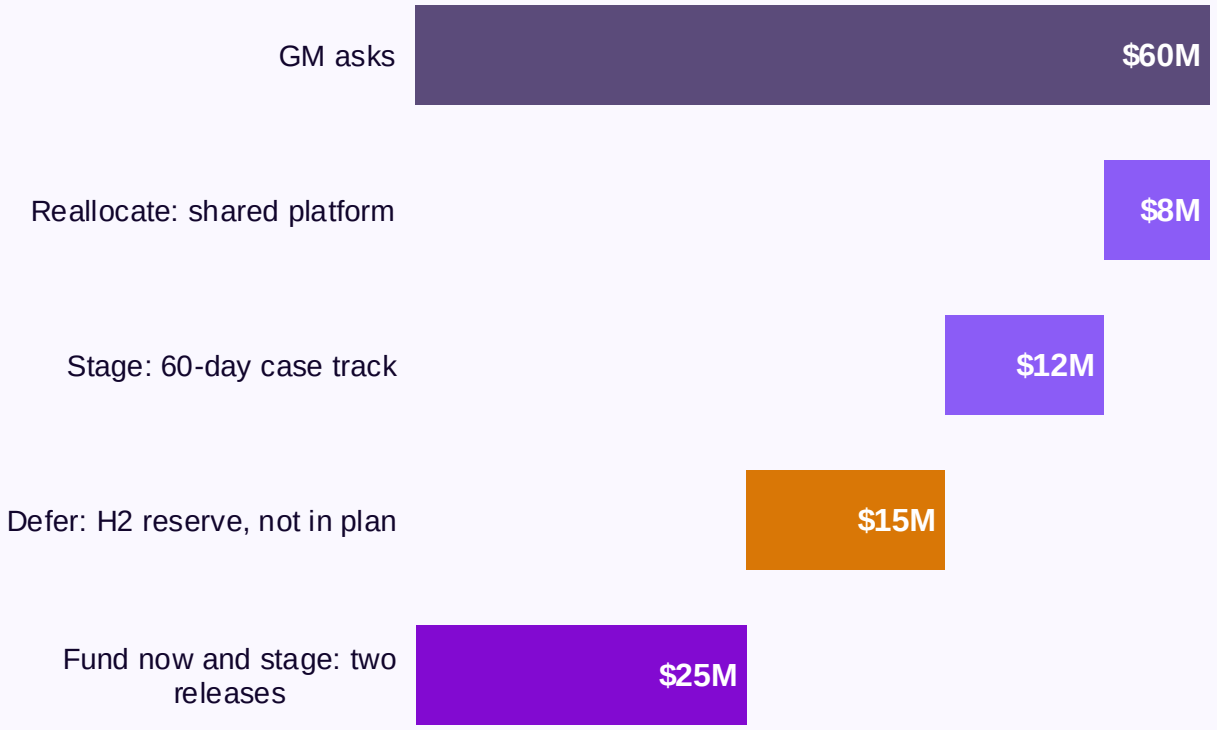

Budgets should work like Nu's credit

Nu's 20-F describes low-and-grow: small limits, raised on behavior. Budgets get the same test-and-learn: start small, grow when four indicators hold: activation, 30-day retention, CAC and unit cost against plan. That is smart efficiency, run by owners.

Scores and weights are my judgment (A9); option 3 stays first if any single weight moves 10 points (backup C). Sources: Nu Q2'26 release and 6-K (opex $806.2M; net revenue ~$4.1B a quarter), Q2'26 call, Form 20-F. Calculations: the 15 bps is on managerial revenue, ~$23.5B annualized; the 1.1% is on opex, ~$3.2B annualized; the efficiency-ratio points are on Nu's denominator (NII plus fees).

DELIVERABLE 1 // PLANNING

Five answers for $60M: fund now, stage, reallocate, defer or stop

FUND NOW // FIRST RELEASE, 1 JAN 2027

$15M

$10.5M to core markets (70%) and $4.5M to new bets (30%), for cases already vetted.

STAGE-GATE // SECOND RELEASE, 31 MAR

$10M

To units whose Q1 indicators hold, decided on Q1 data in early April. Completes the $25M.

DEFER // H2 RESERVE, NOT IN PLAN

Up to $15M

Only from H1 profit above plan, inside the ~20% guide, with NPL 90+ on plan. The CFO decides; Risk can block; IR sets the disclosure.

$8M of country asks reuse the shared code base at near-zero marginal cost (A5); anything Engineering cannot confirm moves to the case track, and the cap does not grow. $12M gets 60 days to a case with my team, then is funded, deferred or stopped. Stop is real: a unit below plan on two of four indicators has its second-release share held (slide 15).

A lean hub and three meetings bring planning in-house

THE HUB

A planning hub of 4-6 people (A10)

One planning model, read straight from Nu's data platform.

Its KPIs: cycle time under 40 days, forecast accuracy, and 100% of spend with an approved case.

Finance partners in each market and vertical: solid line to the hub, dotted line to the GM, in place by late November.

A PMO agent and a review agent do the consolidation (backup H). I hire for modeling and plain-English writing.

Meeting	Who runs it	Output
Squad clinics, weekly	Finance partner, with the GM	A case in the standard template, co-signed by the GM
GM one-to-ones, every two weeks	Me	No surprises at the lock; every ask has a path to yes
Release review, quarterly	CFO decides, on my recommendation	Release memo to the GMs the same day

Capacity, not only money: every case states the headcount and engineering capacity it needs, and Engineering confirms it at the lock, so a release never funds work the platform cannot staff. Partners and GMs own the case and its numbers; I assemble the pack and recommend; the CFO decides; the hub runs the release.

RISK

GMs game the indicators

Finance partners own the read-out; the review agent ties every figure to the data.

RISK

The $8M platform estimate slips

What Engineering cannot confirm moves to the case track; the cap does not grow.

RISK

The hub becomes a cost GMs resent

Net new cost is funded inside the cap and shown first (A12). If cycle time slips, simplify; do not hire.

The capital dispute becomes one choice for the CEO: four uses, one test

WHAT IS ON THE TABLE

Four uses of equity

Brazil deepening.

Nu Mexico: bank authorized 10 Jul 2026, operating since 6 Aug; $4.2B planned to 2030.

US charter: OCC conditional approval 29 Jan 2026; capital in by about 29 Jan 2027.

Buyback of up to $1.0B, announced Jun 2026.

THE TEST

Return on allocated capital

After-tax return on the extra equity each use needs, against that market's cost of equity, with headroom by entity in a downside case.

Beating the cost of equity creates value even if it dilutes the 33% group ROE. The buyback is the bar.

WHO DECIDES, BY WHEN

Before Investor Day

The CFO recommends, the CEO decides, the Board approves at this meeting, the last before Investor Day on 8 Dec.

One page per use: return, capital, headroom, risk. Cost of equity comes from Treasury.

On opex, both positions go into the T-16 memo as options: core markets first, new bets first, or the staged 70/30 release. I recommend 70/30: mature cohorts earn about $31 a month at eight years against $17.1 for the group, and new bets are judged on activation, retention and unit cost, not first-quarter profit. The CEO decides; the dissent is recorded; the Board sees one recommendation. If the dispute is about equity, the test above decides it (A4).

Sources: Nu Q2'26 release (ROE 33%, ARPAC $17.1); Q1'26 cohort slide ($30.8 at 96 months vs $15.9 total); Nu announcements (Mexico 10 Jul and 6 Aug 2026; OCC 29 Jan 2026; buyback 4 Jun 2026); Nu IR (Investor Day 8 Dec 2026).

When a senior GM pushes back: four moves, in the same order every time

STEP 1

Talk privately first

I confirm the strategic goal before any budget line comes up. Nobody is corrected in front of the CFO.

STEP 2

Move to the evidence

From "I need $25M" to "what would prove this works?" The published rule does the arguing, not me.

STEP 3

Offer a conditional yes

A funded start, the $4.5M for new bets in the first release, and a reserved claim on the second release once the indicators hold.

STEP 4

Present together

The GM and I present the plan together at the lock. The CEO's office is briefed in advance and sees the same rule.

Why it works without line authority: people accept a decision they argued against when the criteria were public before it was made. The rule is public on day one, the conversation is private, and the sign-off is joint.
With the two MTeam members: the same four moves run separately at T-21, before they meet at the lock.

Fair process: Kim and Mauborgne, "Fair Process: Managing in the Knowledge Economy", Harvard Business Review.

DELIVERABLE 2 // C-SUITE AND BOARD

Every quarter: the book goes out 7 days before the Board, after a lock at 16 days

Why the book is late: no locked outline, no standard data tables, and units building rival decks. The fix starts today, with the Corporate Secretary, and the same countdown then runs for every Board from the Secretary's calendar. That calendar is the one the ask approves.

T-28 TO T-21

Outline locked

Today I issue the locked outline and standard data tables, so units stop building rival decks.

T-20 TO T-14

Executive lock

One-to-ones at T-21. The capital options memo settles the ranking and the 70/30 split with the CEO and CFO at T-16.

T-13 TO T-7

One pen

Inputs freeze at T-10. Committee chairs are briefed at T-9. The book is on the portal at T-7.

T-6 TO T-0

Decisions, not read-outs

Directors' questions are answered in writing by T-3, so the meeting goes to the capital plan.

Two items cannot slip: the capital plan, because this is the last Board before Investor Day on 8 Dec, and the statutory items for new entities: open an entity only when a license or tax substance requires it; officers and signing follow the stage (backup B).

RISK

Still no agreement at the lock

Both positions go in the memo; the CEO decides; the dissent is recorded, so the Board sees one recommendation.

RISK

Materials are still late at T-10

The locked outline decides: anything outside it goes to the appendix or the next meeting.

RISK

The book holds non-public Q3 results

Portal only; IR sets what directors may discuss. The review agent's drafts run on Nu-approved tools, and a named owner signs each answer.

Board assumed on Tue 17 Nov, four weeks from today (A7). Q3'26 results are due 12 Nov.

The HQ is a governance project before it is a real-estate deal

THE ASSESSMENT

What can go wrong before a lease exists

A regional hub and campus, negotiated across Legal, Tax, Compliance, People and Workplace, in more than one jurisdiction, with no line over any of them. The jurisdiction is not given.

Three early failures: tax residence moves or a taxable presence appears; the incentive is worth less once Pillar Two applies; an officer signs before being approved and insured. So: governance first, campus last.

WHAT IS NEGOTIATED

Two kinds of agreement

Local regulatory agreements: the incentive or grant, any tax ruling, registrations and permits, work permits (Legal, Tax, Compliance, People).

Campus infrastructure agreements: lease or build-to-suit, fit-out, utilities, land and zoning (Workplace, Legal).

HOW I WOULD CHOOSE THE SITE

Four hard tests, then five criteria

1. Regulatory: the hub's activities need no license Nu does not have (Compliance).

2. Tax: people and decisions there do not move Nu Holdings' tax residence or create a taxable presence (Tax opinion at gate 1).

3. Officers: Nu can field directors who pass fit-and-proper (Legal, People).

4. Substance: real payroll and assets, so the incentive survives Pillar Two (Tax, People).

Then five weighted criteria: talent and wage cost; incentive net of clawback; campus cost and timing; modeled tax rate; political and reputational risk (weights in backup J).

I start where Nu already has licensed substance and a local CFO (Brazil, Mexico, Colombia) or is building (the US). Two sites go to term sheet; the CEO and CFO pick. If a shortlist already exists (A13), the tests run on it at gate 1 and the criteria become the tie-break.

Nu Holdings is Cayman-incorporated (Form 20-F). Nu is above the EUR 750M Pillar Two threshold; 15% minimum; 2026 carve-out 9.4% of payroll and 7.4% of tangible assets (OECD GloBE, Art. 5.3, 9.2). Brazil applies a domestic minimum top-up tax from 2025. Jurisdiction open (A13); no savings figure until a site is chosen.

Four decision gates in 120 days; nothing is signed between them

Gate	Owner	What we negotiate	Exit test	Walk-away
Gate 1, D+30: can we? Tax and residence	Tax, with Compliance	Nothing yet: internal	Tax-residence and taxable-presence opinion for both sites; modeled tax rate holds under Pillar Two; Compliance confirms permission	Any site where residence or a taxable presence moves, whatever the incentive
Gate 2, D+60: what may we offer? Regulatory and grant terms	Legal, with Tax	The incentive agreement and any ruling; commitments only inside the published plan	Signed term sheet: 85% of headcount keeps 85% of the grant; 24 months' grace; one site dropped	A cliff-edge clawback; a headcount commitment above plan; terms that bind other markets
Gate 3, D+90: who may bind Nu? Officers and signing	Legal and People	Nothing external: Nu's own governance	Officers named from licensed executives; fit-and-proper files in (started at gate 1); D&O bound; signing matrix and powers of attorney approved	Any appointment without D&O cover or regulator approval
Gate 4, D+120: do we commit? Lease and campus	Workplace, with Legal	Lease or build-to-suit, fit-out, utilities, infrastructure contribution	Lease inside the FY27 plan, cost phased, a break option matched to the grant's grace, a long-stop date tied to gate 2	No break option, or cost committed before the incentive is signed

Gate 0 is the charter signed today: why, the outcomes, the boundaries, the CFO as sponsor. Each gate after it is a decision the CFO makes on a pack I assemble; the walk-aways are the red lines of the negotiating mandate. Legal leads the room. What we give stays inside the published plan: no headcount or spend commitment the $25M cap cannot carry.

Dates run from the charter signed today (D+0 = 20 Oct): gate 1 on 19 Nov, two days after the Board; gates 2-4 in mid-December, mid-January and mid-February (backup F). The 85% and 24-month terms are proposals. Q2'26 showed how real-estate timing moves the efficiency ratio, so the lease cost is phased.

Experts own the judgment, I own the process, the CFO owns residual risk

STATUTORY OFFICER IMPLICATIONS

Who signs, who sits, who carries the risk

Signing: central only until gate 3, which also avoids an accidental taxable presence; then dual signature above limits set by category, and powers of attorney limited in scope and time, reviewed annually.

Seats: licensed executives who pass the regulator's fit-and-proper test. Not me: I run the process and hold no power of attorney.

Liability: officers carry personal liability for the entity's filings and conduct (Legal confirms per site). D&O names the new entity before activation. Regulator approval sets the critical path, so files start at gate 1.

Capital: a regulated hub entity needs its own capital plan and goes on the Board's statutory agenda (backup B).

LEADING AS AN INTERIM ACROSS FIVE FUNCTIONS

One pod, one log, clear decision rights

Weekly 45-minute pod: Legal, Tax, Compliance, People and Workplace, each with one lead who can commit their function.

I own the integrated outcome and the decision process; I do not second-guess a tax opinion. Each function owns its technical judgment. The CFO owns acceptance of any material residual risk at each gate; the CEO decides the site; the entity's board appoints officers; the Audit and Risk Committee hears at gates 1 and 3.

One decision log, kept by the PMO agent; escalation to the CFO within 48 hours; a named deputy covers me.

When functions disagree: their words go in the log; 48 hours to a joint view; if none, both options go to the CFO with mine. Legal and Compliance can veto on legality; nobody vetoes on price.

RISK

Tax residence moves

Opinion at gate 1; meeting patterns unchanged; no early signing (Tax).

RISK

Officer approval runs late

Files at gate 1; no activation before approval; the lease long-stop moves with it (Legal, People).

RISK

Dependence on me

A named deputy, the decision log, and gate packs the CFO can decide on without me.

Signing limits and the delegation model are proposals. If the hub sits inside an existing licensed entity, gate 3 shrinks to a powers-of-attorney update (backup B). Full HQ risk register and site scorecard: backup J.

Influence with hands-on rigor: a few clear rules, published early

RULE 1

Publish the rule, then negotiate

People accept outcomes they argued against when the criteria were public first.

I publish the scoring on day one and do not change it mid-cycle. Every GM sees the same four indicators.

RULE 2

Fix the numbers in private

Model gaps are closed one to one before anything reaches the CFO or the Board.

Senior people trust you when you never surprise them in a room.

RULE 3

Own the model and the clauses

I build the model and read the clauses myself. AI does the first pass; I still do the last.

Influence at this level is earned by being right on the detail.

Where I push back on the CFO: when a decision skips the published rule.
What I leave alone for 90 days: local-CFO decision rights in Mexico and Colombia, credit-model governance, and the IR calendar.

Fair process: Kim and Mauborgne (HBR).

How I work in a matrix: what I own, what experts own, what I leave alone

Problem	I own: the model, the memo, the log	I influence, with no line authority	Others own: the decision, the signature
Planning	Build and review the single model; write the case template; read every first-release case before the lock	GM one-to-ones; the lock with the CEO and CFO; the release memo	Deciding releases (the CFO does); local-CFO decision rights
Board	Draft the capital options memo; tie every figure in the book to its source; answer directors' data questions by T-3	The two executives at T-21; committee chairs at T-9	Presenting the ranking (the CFO does); the IR calendar
HQ	Read the term sheets and clauses; keep the decision log; build the site scorecard	The weekly pod; the mandate with the CFO; the CEO on the site	Signing; holding a power of attorney; sitting as a statutory officer

The same split in all three problems. I own the process and the integrated recommendation. Experts own their technical judgment. The accountable executive owns the decision and its residual risk.
The team I build: I hire for modeling and plain-English writing; each hub member owns one market's release pack; a named deputy sits in the HQ pod, so by the second release nothing depends on me alone.

Next 90 days: the Board on 17 Nov, the first release on 1 Jan, and the ask

NOW TO THE BOARD

20 Oct to 19 Nov

Today: Board outline out, HQ charter signed, tax gate launched.

Early Nov (T-16): capital options lock with the CEO, CFO and MTeam.

17 Nov: Board approves the FY27 plan. 19 Nov: HQ gate 1.

BOARD TO YEAR-END

Build the hub

Late Nov: hub in place, partners embedded; PMO agent live, status templates retired.

Early Dec: squad clinics running; $12M case track under way.

Mid-Dec (D+60): HQ grant terms agreed.

JANUARY TO MARCH

Open FY27

1 Jan: FY27 starts; $15M first release.

Mid-Jan (D+90): HQ officers in place; my 90-day report to the CFO.

Mid-Feb: lease (D+120). 31 Mar: Q1 close; second release decided in early April.

Stop rules, public from today: a unit below plan on two of four indicators has its second-release share held. Efficiency ratio above the guide in force at Q1 close: the second release is held for every unit. Credit cost or NPL 90+ above plan: the reserve stays shut, and Risk can block it.

THE ASK

Approve the $25M FY27 cap in two releases, the Board calendar and the HQ charter.

In 90 days (mid-January): every first-release dollar has an approved case; the Board book went out 7 days early; HQ gates 1 and 2 are cleared. You are approving one way of deciding, used three times, and I report on it in 90 days.

Backup

A Full assumptions (A1-A13) | B Statutory entity model | C Option sensitivity
D Sources | E Full-year split by horizon | F Day-by-day timeline | G Stakeholder map
H Two AI agents | I Scenarios and stop rules | J HQ site scorecard and risk register

BACKUP A

All assumptions, with the facts they rest on

#	Statement	Class	Basis
A1	Nu Q2'26: 138.9M customers, monthly ARPAC $17.1, cost to serve $1.0, efficiency ratio 19.5%, ROE 33%, net income $1.06B.	FACT	Q2'26 release and 6-K
A2	FY26 efficiency ratio near 20%; the US entry kept within about 100 bps of efficiency-ratio impact.	FACT (management guidance)	Q2'26 call, 13 Aug 2026
A3	The $60M asks and $25M cap are the case's figures. $35M is about 15 bps of annualized revenue, about 1.1% of opex and about 0.2 points of efficiency ratio ($25M: about 0.15).	ASSUMPTION + CALCULATION	Case brief; Q2'26 figures
A4	The MTeam dispute is about the growth-opex envelope (core vs new bets), not regulatory capital by entity.	ASSUMPTION	Case brief is silent
A5	$8M met on the shared platform at near-zero marginal cost; unconfirmed scope moves to the case track; $12M needs a case, ready in 60 days.	ASSUMPTION	My estimate; Engineering confirms
A6	Spend above $25M only from H1 profit above plan, inside the ~20% guide, NPL 90+ on plan; CFO decides, Risk can block, IR sets disclosure.	RULE (proposed)	To agree with the CFO
A7	Board in 4 weeks (assumed Tue 17 Nov); Investor Day 8 Dec 2026; the Board approves the capital plan before the Investor Day story is set.	FACT (dates) + ASSUMPTION	Case brief; Nu IR
A8	HQ jurisdiction open. Nu is above the EUR 750M Pillar Two threshold; 2026 carve-out 9.4% of payroll, 7.4% of tangible assets.	FACT (rule) + ASSUMPTION (site)	OECD GloBE rules
A9	Option scores and weights are my judgment; third-party benchmarks are context only.	ASSUMPTION	Slide 4; backups C, D
A10	FY27 envelope: first release 1 Jan 2027, second at Q1 close (31 Mar), reserve at H1 close. Hub of 4-6 people.	ASSUMPTION	Calendar fiscal year; sizing is mine
A11	The hub can run Nu-approved AI tools inside Nu's environment; Security and Risk approve data access before the agents go live.	ASSUMPTION	To confirm with Security and Risk
A12	Net new FY27 cost for the hub and the HQ is small and funded inside the $25M before the GM releases; if material, the second release shrinks by that amount.	ASSUMPTION	To size with the CFO
A13	HQ jurisdiction open; two candidate sites go to term sheet; the site scorecard weights are my judgment (backup J).	ASSUMPTION	Case brief is silent

BACKUP B

Open an entity only when a license or tax substance requires it; officers and signing follow the stage

Stage	Trigger for a local entity	Setup	Officers, signing and insurance
1. Market test (new countries)	No local license needed and no taxable presence; served from an existing licensed entity or a partner bank (as the US is today, through Lead Bank, since 10 Sep 2026).	No local entity. Cross-border or partner model.	Central signing only. No local director. Prevents an accidental permanent establishment.
2. Licensed scale-up (US charter, new verticals)	A regulator requires a local licensed entity (deposits, lending, custody), or substance rules require local payroll and assets.	Dedicated licensed entity with its own capital plan and headroom.	Fit-and-proper directors; two central officers plus one local leader; dual signature above a set limit; D&O before activation.
3. Core hub (Mexico, a bank since Aug 2026; Colombia; the HQ)	Full banking or fintech license in force; local CFO in place (already so in Mexico and Colombia).	Full licensed entity; regional campus where the HQ lands.	Audit and Risk Committee oversight; dual signature above limits set by category; director liability insurance; annual review of powers of attorney. If the HQ sits inside an existing licensed entity: a powers-of-attorney update only.

Sources: Nu announcements (US launch via Lead Bank, 10 Sep 2026; OCC conditional approval, 29 Jan 2026; Mexico bank authorization, 10 Jul 2026; local finance leadership per the CFO appointment release). Signing limits are proposals.

BACKUP C

Option 3 stays first under every 10-point change to a single weight

Weight changed	Option 1	Option 2	Option 3	Order
Base weights	57.8	63.8	91.8	3 > 2 > 1
Meets $25M cap +10 pts	62.4	68.2	92.9	3 > 2 > 1
Meets $25M cap -10 pts	53.1	59.3	90.6	3 > 2 > 1
Growth return +10 pts	55.4	62.6	92.2	3 > 2 > 1
Growth return -10 pts	60.1	64.9	91.3	3 > 2 > 1
GM ownership +10 pts	54.3	61.4	90.9	3 > 2 > 1
GM ownership -10 pts	61.2	66.1	92.6	3 > 2 > 1
Agility +10 pts	55.1	59.8	91.5	3 > 2 > 1
Agility -10 pts	60.4	67.7	92.0	3 > 2 > 1
Speed +10 pts	61.9	65.6	89.9	3 > 2 > 1
Speed -10 pts	53.6	61.9	93.6	3 > 2 > 1

Base weights: cap 30%, growth return 25%, GM ownership 20%, agility 15%, speed 10%. The changed weight moves 10 points; the others are rebalanced pro rata. Smallest gap between options 3 and 2: 24.2 points. Scores are judgment (A9).

BACKUP D

Every number is a sourced fact, a labeled assumption or context

Topic	Source and class	Data point	Where it is used
Nu scale and efficiency	Nu Q2'26 release and 6-K; Form 20-F | FACT	138.9M customers; ARPAC $17.1; cost to serve $1.0 ($0.8 a year earlier); efficiency ratio 19.5% (17.6% in Q1; ~20% FY26 per the call); ROE 33%; net income $1.06B; opex $806.2M; net revenue ~$4.1B; low-and-grow underwriting.	Slides 3, 4, 7; backup I

Cohorts	Q1'26 earnings presentation | FACT	$30.8 monthly ARPAC at 96 months since origination vs $15.9 total.	Slide 7; backup E
HQ tax rules	OECD GloBE Model Rules; Form 20-F | FACT (rule)	EUR 750M threshold; 15% minimum; 2026 transitional carve-out 9.4% of payroll and 7.4% of tangible assets (Art. 5.3, 9.2); Nu Holdings is Cayman-incorporated.	Slide 10
Context only	Hackett, McKinsey, Gartner, HBR, NACD, Deloitte, Baker McKenzie; three-horizons framing (Baghai, Coley and White) | CONTEXT	Central hubs shorten planning cycles; active reallocators earn higher returns; fair process wins acceptance; Board books at T-7.	Footers and talk only
AI in operations	Nu Q2'26 release; Nu newsroom (Hyperplane, Jun 2024) | FACT. Gartner; PMI; Science; HBS/BCG | CONTEXT	AI agents handle more than 60% of support chats in Brazil; AI-first strategy. Studies and surveys on AI in project reporting, writing and finance (backup H).	Slides 6, 9, 12; backup H

Research assisted by AI tools; every figure, calculation and recommendation was checked by me.

BACKUP E

Full-year split: core markets protect the year, new bets earn the reserve

CORE MARKETS // BRAZIL, MEXICO, COLOMBIA

$16.5M in the cap, plus up to $5.0M from the reserve

70% of the first release: $10.5M on 1 January.

Mature cohorts reach about $31 of monthly ARPAC at eight years ($30.8 at 96 months, Q1'26) against $17.1 for the group, at 33% ROE.

NEW BETS // NEW VERTICALS AND MARKETS

$8.5M in the cap, plus up to $10.0M from the reserve

30% of the first release: $4.5M on 1 January.

Judged on activation, retention and unit cost until a cohort can show payback. First claim on up to $14M across the second release and the reserve, if it opens.

A new bet judged on mature-market profit in its first quarter always loses. The horizon split is a frame, not evidence.

BACKUP F

One timeline: tenure days, Board countdown and HQ gates

Tenure day	Date	Board countdown / HQ gate	What happens
Day 60	Tue 20 Oct	T-28 | HQ D+0	Board outline out; HQ charter signed; tax gate launched
Day 67	Tue 27 Oct	T-21	One-to-ones with each executive
Day 72	Early Nov	T-16	Capital options lock with CEO, CFO and MTeam
Day 78-81	Early Nov	T-10 to T-7	Inputs freeze; chairs briefed (T-9); book on portal (T-7)
Day 88	Tue 17 Nov (assumed)	T-0	Board approves FY27 plan; first-release allocation published
Day 90	Thu 19 Nov	HQ D+30	Gate 1: tax and residence opinion; two sites to term sheet
Day 95	Late Nov		Hub in place; finance partners embedded
Day 105	Early Dec		Squad clinics running; $12M case track under way
Day 120	Mid-Dec	HQ D+60	Gate 2: grant terms (24-month grace); one site dropped
Day 133	Fri 1 Jan 2027		FY27 starts; $15M first release
Day 150	Mid-Jan	HQ D+90	Gate 3: officers and D&O; 90-day report to the CFO
Day 180	Mid-Feb	HQ D+120	Gate 4: lease
Day 222	Wed 31 Mar		Q1 close; second release ($10M) decided on Q1 data in early April

BACKUP G

Stakeholder map: who decides, who is consulted, and when they hear it

Who	Role in these decisions	When they hear it
CEO	Decides the capital ranking	Options memo before T-16; CEO's office briefed before any GM lock
CFO (since 13 Jul 2026)	Recommends the ranking; decides releases and the H2 reserve	Weekly; every pack before it moves
Board chair and committee chairs	Approve the capital plan; oversee entities	Pre-read at T-9; book at T-7
Corporate Secretary	Owns the Board book and statutory calendar	From today (T-28)
The two MTeam members	Hold the opposing capital views	One-to-ones at T-21; joint lock at T-16
Local CFOs (Mexico, Colombia); Brazil CFO (new role)	Own local decision rights; inputs to the model	Squad clinics; decision rights unchanged for 90 days
Risk	Confirms credit conditions; can block the H2 reserve	Quarterly release review; H1 close
IR	Sets how the plan and reserve are disclosed	Before Investor Day (8 Dec)
Tax, Legal, Compliance, People, Workplace	Own HQ gates 1-4	Weekly HQ pod; 48-hour escalation
Counterparties (local authority, incentive agency, landlord)	Across the table	Only after gate 1, through Legal; never before the CEO and CFO see the scorecard
GMs	Bring the cases; co-sign them	Squad clinics weekly; one-to-ones every two weeks

BACKUP H

Two AI agents take the busywork; people own every number and decision

	PMO agent	Review agent
Day to day	Every Monday it reads status where the work happens (tracker, shared drive, team channels) for the HQ gates, the release plan and the Board countdown. It updates the gate tracker and decision log, flags dates at risk and drafts the pod note.	When a GM submits a case, it checks the template and the four indicators, ties each figure to the data platform and flags gaps before the clinic. For the Board, it drafts the book from the locked tables and drafts answers to directors' questions.
What it replaces	Status templates and the weekly chase. Owners correct a draft instead of filling in a form.	Manual tie-outs and blank-page first drafts. Analyst time moves to judgment.
Why it is good practice	Gartner (2019): data collection, tracking and reporting are the project-management tasks AI takes over; 80% of today's tasks gone by 2030. PMI (2023): reporting is project managers' top AI use (34%).	Science (Noy and Zhang, 2023): writing tasks 40% faster, quality up 18%. HBS/BCG (2023): inside AI's frontier, 12.2% more tasks and 40% higher quality; outside it, 19 points less accurate. Gartner (2024): 58% of finance teams use AI.
Guardrails	Reads only; never changes a date or a decision. Each owner confirms their line. Escalation to the CFO stays human, within 48 hours.	Nu-approved tools inside Nu's environment (A11). A named person signs every figure and answer. A wrong number that reaches the CFO sends that step back to manual until it is fixed.
How I measure it	Hours spent on status (baseline now); gate dates hit; no status templates by late November.	Cycle time under 40 days; errors caught before the clinic; directors' answers out by T-3.

Nu context: AI agents handle more than 60% of support conversations in Brazil (Q2'26 release); AI-first strategy (Hyperplane acquisition, Jun 2024). The studies are context for the method, not a forecast of Nu's savings.

BACKUP I

The downside is handled by rules: miss Q1 and the second release waits

	Market slows	Base plan	H1 beats plan
Funded spend vs the $25M cap	$15.0M (second release held at Q1 close)	$25.0M ($15M + $10M)	$25.0M
H2 reserve	$0	$0 (not assumed)	Up to $15.0M from H1 profit above plan, inside the guide in force
Stop rules	A unit below plan on two of four indicators: its second-release share is held	Efficiency ratio above the guide in force at Q1 close: the second release is held for every unit	Credit cost or NPL 90+ above plan: the reserve stays shut; Risk can block it
Top risks and owners	GMs game the indicators: finance partners own the read-out	Board book slips: the outline locked today decides what goes to the appendix	HQ: tax residence, clawback, officer approval, site politics, key-person risk (backup J)
What I report in 90 days	First monthly indicator read-outs per unit	Board delivered; capital plan approved; cycle-time and forecast baselines	HQ gates 1 and 2 cleared; gate 3 pack ready

Margins are protected without a mid-year freeze. No value figures are claimed beyond the spend lines; before HQ gate 1 they would be guesses.

BACKUP J

HQ site scorecard and risk register: hard tests first, then weights

Hard tests first, pass or fail: license, tax residence and taxable presence, fit-and-proper officers, real payroll and assets. Only sites that pass are scored.

Criterion	Weight	Evidence and owner
Talent pool and wage cost	30	Hiring data and wage benchmarks (People)
Incentive value net of clawback	20	Draft terms with the clawback modeled (Legal, Tax)
Campus cost, flexibility and timing	20	Lease options, break clauses, fit-out time (Workplace)
Modeled tax rate under Pillar Two, including any domestic top-up	15	The gate 1 model (Tax)
Political and reputational risk	15	Local stakeholder map (Legal, Comms)

Risk	Mitigation	Owner
Tax residence or a taxable presence moves	Opinion at gate 1; meeting patterns unchanged; no early signing	Tax
Grant clawback	Proportional scaling and 24 months' grace; walk away from cliff-edge terms	Legal
Officer approval runs late	Files at gate 1; no activation before approval; the lease long-stop moves with it	Legal, People
Site politics and disclosure	No public contact before the scorecard; one spokesperson (Comms); IR decides what is disclosed and when	Comms, IR
Dependence on me	A named deputy, the decision log, gate packs the CFO can read without me	Me

Weights and mitigations are my proposals (A13). No savings figure until a site is chosen.
